

Cybersecurity Dashboard

AI Prompt Guide — Bolt.new / Lovable.dev

How to Use This Prompt

1. Go to **bolt.new** or **lovable.dev**
2. Create a new project
3. Copy and paste the prompt below into the chat
4. Wait for the AI to generate your dashboard
5. Refine and iterate based on what you see

The Prompt

Copy everything below this line and paste it into Bolt.new or Lovable:

"Build a cybersecurity threat intelligence dashboard with the following features:

1. Fetch daily critical vulnerabilities from CISA KEV API
(https://www.cisa.gov/sites/default/files/feeds/known_exploited_vulnerabilities.json)
2. Fetch additional CVE details from NVD API
(<https://services.nvd.nist.gov/rest/json/cves/2.0>)
3. Display vulnerabilities as cards showing: CVE ID, severity level, affected vendor/product, date added, and short description
4. When a card is clicked, show a detailed side panel with full description, attack vector, CVSS score, and remediation steps
5. Add an attack tree visualization showing MITRE ATT&CK tactics related to each vulnerability
6. Include filters for: severity (Critical/High/Medium), date range, and vendor
7. Add a top navigation bar with a dashboard summary showing total critical vulns today, trending attacks, and most affected vendors
8. Make it dark themed, professional, cybersecurity look and feel

9. Make it fully responsive"

Next Steps After Getting Your MVP

Deploy for free: Connect to Vercel (vercel.com) — completely free for personal projects.

Add a database: Use Supabase (supabase.com) — free tier includes 2 projects and 500MB storage.

Improve the prompt: Once you see the output, describe what you want to change and paste that back into the AI chat.

Free Data Sources

Source	What It Provides	URL
CISA KEV	Known Exploited Vulnerabilities	cisa.gov/known-exploited-vulnerabilities
NVD / NIST	Full CVE database with CVSS scores	nvd.nist.gov
MITRE ATT&CK	Attack tactics and techniques tree	attack.mitre.org
CVE.org	CVE identifiers and descriptions	cve.org

Good luck! You've got this. ■
